

Explorer Learning Activities

Explore the coral reefs of Belize

5. Explore the Belize Coral Reef

Requirements: paper or exercise book for notes

Exploration team: in a team of 3-5 explorers and as a class

Curriculum: Science, Geography, English, Global Citizenship

Time: 20 minutes

Visit EarthMuseum Learn's [digital history explorer map](#), and select 'Fragments of Hope' from the drop-down learning programme menu to discover stories about the Belize coastline. Imagine that you are going to explore the Belize Coral Reef. In your team of explorers, discuss and answer these questions:

- What will you need to find your way around the Belize coastline and the coral reefs?
- What would you hope to see there (animals, plants)?
- What dangers might there be (weather, animals, water)?
- How can you keep yourself safe?
- How can you keep the marine environment safe when you are exploring it?
- How will you record the information you have found?

Choose a spokesperson for your team who will share your team's thoughts with the class. Discuss the answers to these questions as a class.
